Today's Webinar

September 13, 2023, from 10:30-11:30 PT / 1:30-2:30 ET

Heat Pumps: A More Efficient and Healthier Solution

Presented by Clive Carr
Residential Sales Manager, HVAC Product Sales, Mitsubishi Electric Sales Canada Inc.

Home construction techniques have seen some impressive advancements in recent years to the building envelope as we strive for greater energy efficiency. Yet most builders haven't made big changes to the mechanical systems they're installing. Point in case: the most used thermal appliance has a co-efficiency of performance of less than 1.

This webinar will explore the energy efficiency gains that heat pumps provide (3-5 times more efficient than conventional systems), as well as the air quality (no risk of carbon monoxide) and comfort (discharge air temperature is variable) benefits for the occupants. Webinar participants will also learn about pairing a hydronic coil and a heat pump air handler run off the water heater, which allows a dwelling to reduce the amount of fossil fuel appliances and thus the carbon footprint.

CHBA Members will be able to access the recording & slide deck at chba.ca/NZwebinars

Heating and Cooling

Heat Pumps
Your Most Energy Efficient Heating & Cooling Appliance

Presented by Clive Carr

September 13, 2023

Table of Contents

Mitsubishi Electric Heating and Cooling Canada

Vision

To be the most trusted industry leader in providing innovative heating, cooling and ventilation technology engineered specifically for Canadian climates.

Mission

To deliver quality comfort and value to all Canadians through leading-edge engineering, locally inspired design, and a dedication to superior service.

MESCA HVAC Division

Who we are:

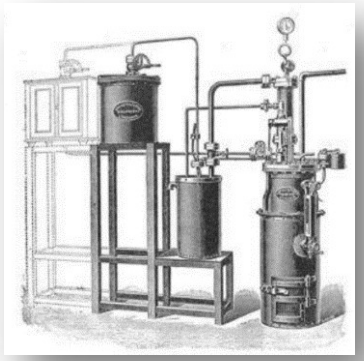
- Canadian subsidiary established in 1979
- Highly involved in sustainability initiatives
- Members of:

  CHBA Net Zero Council, CaGBC, Active House Canada, Passive Buildings Canada,

  EnerQuality NET Zero Technology Advancement Program

History of Heat Pumps

MITSUBISHI ELECTRIC
Heating and Cooling



History of Heat Pumps

- Artificial refrigeration was first demonstrated in 1748
- In 1857 Peter von Rittinger built the first heat pump system
- In 1940 Robert C Webber developed the first ground source heat pump by modifying his freezer
- The world's first mini split was introduced in 1968

History of Heat Pumps

History of Heat Pumps

- Mitsubishi Electric introduced the world's first mini split in 1968
- Mitsubishi introduced the first inverter model in 1985
- Mitsubishi introduced Ductless models to the Canadian market in 1987
- CC-ASHP started to appear in Canada in 2012
- In 2022 Mitsubishi brought to market products that provide 100% capacity at -20C

Energy Efficiency

In the most simplest definition; energy efficiency means to use less energy to get a the same task done.

Efficient Use of Energy

5% efficient

80 -90% efficient

Efficient Use of Energy

15 - 20%

20 – 30%

Efficient Use of Energy

NG furnace is 98% AFUE

Propane furnace up to 98% AFUE

Efficient Use of Energy

300 – 500% efficient!

GHG

IAQ

IAQ

After seeing how gas stoves pollute homes, these researchers are ditching theirs

Rob Jackson, professor of environmental sciences at Stanford University, co-authored a recent study that found gas stoves leak unexpectedly high levels of methane, a powerful greenhouse gas, even when they're off — and they generate significant levels of indoor air pollution.

Burning natural gas generates high levels of nitrogen oxides, linked to asthma in children
Emily Chung - CBC News

IAQ

Exposure to nitrogen oxides, produced when gas is burned, is linked to respiratory problems such as asthma and decreased lung function, especially in children.

For example, a 2013 meta-analysis of 41 studies found that children living in a home that used gas for cooking had a 42 per cent increased risk of having asthma.

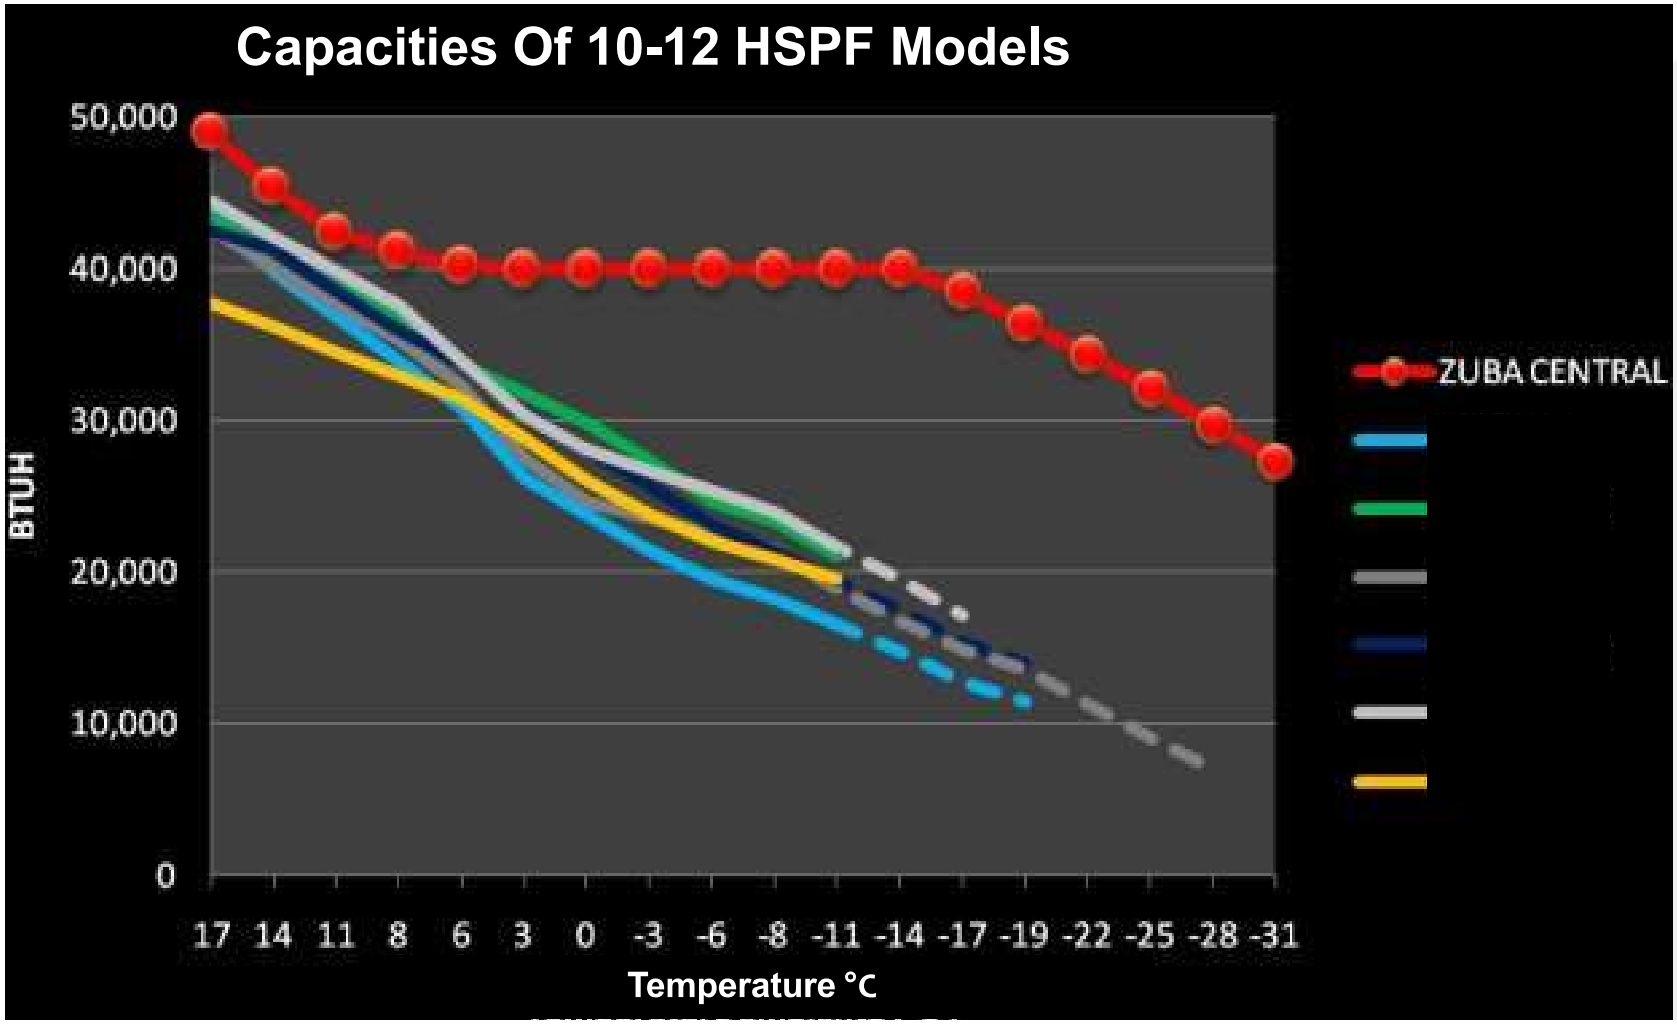
Products and Features

Low Ambient Heating ccASHP

- Maintains 100% of its heating output at outdoor temperatures at or below -15˚C
- 80% of its heating output at -25˚C
- Operates efficiently above a COP of 1 at outdoor temperatures as low as -30˚C

Low Ambient Heating



Low Ambient Heating

Mr. SLIM M-Series Features & Benefits

Whisper Quiet Comfort
The Mr. Slim® M-Series includes whisper-quiet fans and compressors that work so silently you won't even notice they're on. Indoor units operate as low as 19 dB(A) and our outdoor units are some of the quietest in the industry.

Variable Compressor Speed Inverter (VCSi) Technology
Unlike conventional systems which only cycle between On and Off, VCSi systems detect changes in room temperature and readjust the compressor speed to provide high-speed heating and cooling as needed, resulting in energy and cost savings.

Hyper-Heat Inverter H2i™ Technology
Even when temperatures drop to -30°C* – a challenge for many competitive air-source heat pump systems – M-Series stays on the job, keeping the indoors at a comfortable and consistent level with ease.

Flexible Installation, Ducted or Ductless
Mr. Slim® M-Series was designed to have a wide array of applications and configurations. Ducted configurations can easily be implemented into existing ductwork, while ductless configurations are perfect for century homes, cottages, schools, commercial facilities, and more.

Single Zone and Multi-Zone Applications
Available in both single-zone and multi-zone applications, the Mr. Slim® M-Series can target tricky areas or address the individual comfort needs of multiple rooms, all within a single system.

*Includes tolerance. Units can operate in heating mode down to -30° C depending on model and conditions.

M - SERIES Newest Wall Mounted Model

FS Wall Mount H2i Heat Pump

- All Models Energy Star Qualified
- Hyper Heat at -25°C/-13°F
- **100% heating capacity down to -20C**
- 3D i-See Sensor
- Auto Change Over
- Base Pan Heater
- Powerful & Quiet Modes
- Smart Set Function
- Multi-Function Wireless Control
- Single – Split and Multi - Split system compatible
- Available Capacities: 6, 9, 12, 15 and 18K/ BTU

Hyper Heat and Energy Star compliance depends on connected outdoor unit.

M - SERIES Ceiling Cassette Models

SLZ-KF 4 - Way Ceiling Cassette

- Auto Changeover & LEV Control
- Auto Restart
- Base Pan Heater
- Built-in Drain Pump
- Low Ambient Heating at -20°C
- Single – Split and Multi - Split system compatible
- Cooling down to -10°C/+13°F
- Available Capacities: 9, 12, 15 & 18K BTU

MLZ-KP 1 - Way Ceiling Cassette

- Fits between 16 inch on center joists
- Auto Restart
- Built-in Drain Pump
- Low Ambient Heating at -20°C
- Hand Held Remote Control
- Single – Split and Multi - Split system compatible
- Cooling down to -10°C/+13°F
- Available Capacities: 9, 12 &18K BTU
- **Upcoming unit will be 6K BTU**

Hyper Heat and Energy Star compliance depends on connected outdoor unit.

M - SERIES Ducted Model

SEZ – KD Short Duct Run / Ceiling Concealed

- Auto Change Over & LEV Control
- Built –in Drain Pump
- Low Ambient Heating at -25°C with SUZ H2i OD unit
- Single – Split and Multi - Split system compatible
- Cooling down to -10°C/+13°F
- Available Capacities: 9, 12, 15 & 18K BTU

Multi – Position Air Handler SVZ-KP

- Up to 17.6 SEER
- Ducted Air Handler with ECM motor
- External Auxiliary Electric Heater optional
- Low Ambient Heating at -25°C with SUZ H2i OD unit
- Single – Split and Multi - Split system compatible
- Selectable external static pressure
- Available Capacities: 12,18, 24, 30 & 36K BTU

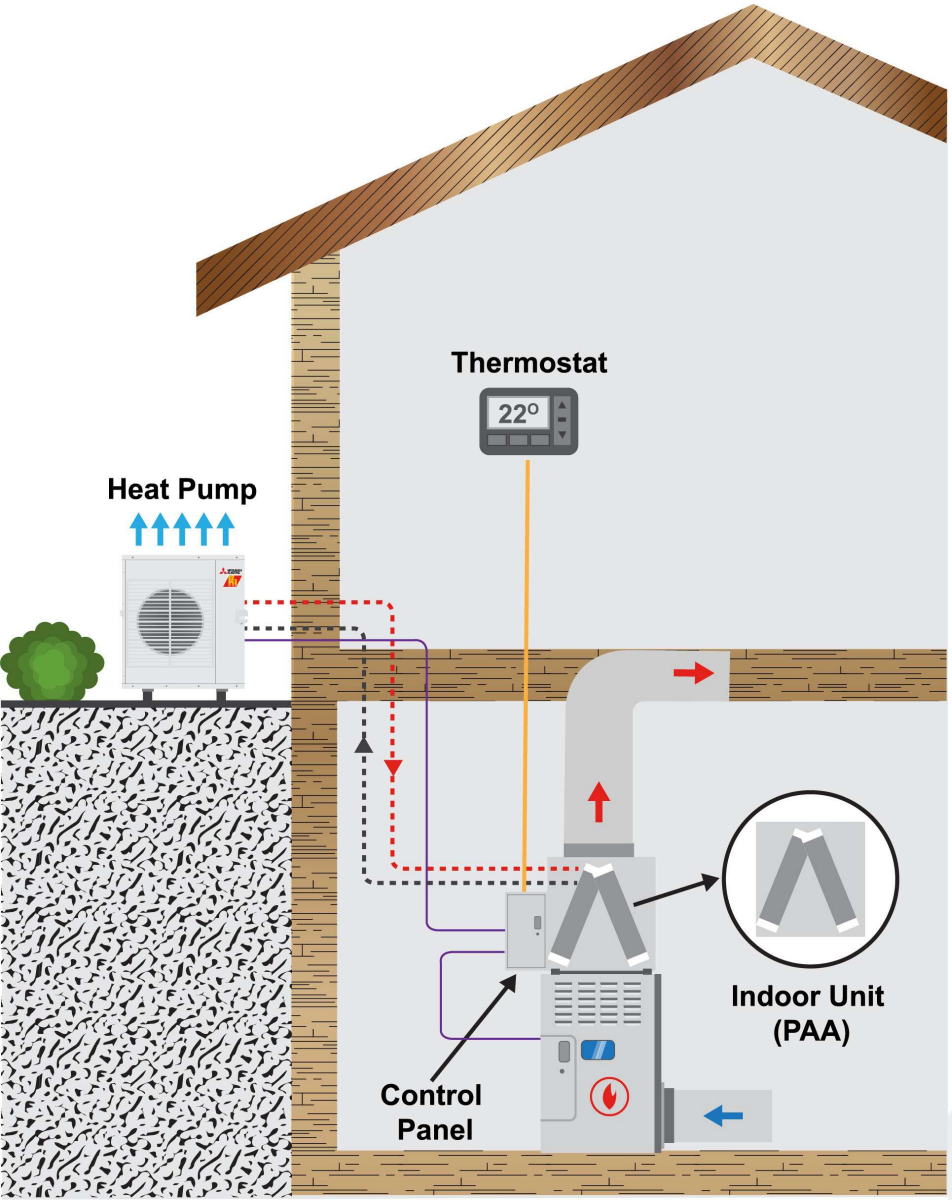
Hyper Heat and Energy Star compliance depends on connected outdoor unit.

M - SERIES Floor Mount Model

MFZ-KJ Floor Mount

- Hyper Heating down to -25°C
- All models Energy Star Certified
- Auto Restart, Change Over & LEV Control
- Base Pan Heater
- Multi-Function Wireless Control
- Powerful & Quiet Mode
- Smart Set Function
- Single – Split and Multi - Split system compatible
- Cooling down to -10°C/+13°F
- Available Capacities: 9, 12, 15 & 18K / BTU

Hyper Heat and Energy Star compliance depends on connected outdoor unit.



Add on A-coil

- Hyper Heating down to -25°C
- Certified Base Pan Heater
- Single – Split and Multi - Split system compatible
- Cooling down to -10°C/+13°F
- Available Capacities: 2 to 3.5 Tons

Hyper Heat and Energy Star compliance depends on connected outdoor unit.

M - SERIES Connectivity

Three easy ways to connect heat pump and air conditioning systems for maximum flexibility with Hyper Heat and standard product lines

Application of systems

Centrally Ducted Cold Climate System

- Zuba-Central - Series
  - Forced air cold climate Air Source Heat Pump
  - Available sizes 2.0, 2.5, 3.0, 3.5, 4.0 Ton
  - No back up heat required (when sized appropriately)

Multi Split Cold Climate System

- Zuba Multi-series
  - Multi split cold climate Air Source Heat Pump
  - Available sizes 1.67, 2.0, 2.5, 3.0, 3.5 and 4.0 Ton
  - No back up heat required (when sized correctly)

The Challenge

Located in a rural community not serviced by natural gas, this 1,800 sq-ft bungalow was built in the early 1970s.The owners were paying upwards of $4000/ yr in heating costs. Their solution was to install a centrally ducted cold climate system. The transition to better technology has led to a 60% savings and has provided a seamless transition. According to the owners, the system has performed exceptionally well throughout the coldest days.

Extended Warranty

At Mitsubishi Electric, we stand behind every product that bears our name.

That's why all City-Multi systems are backed by our standard 1-year parts and 7-year compressor warranty.

With the completion of our CM-01, Installation and Commissioning, contractors can receive a **5-year parts and 7-year compressor** warranty. In addition, they will be recognized as a Registered Level Contractor.

Then we take that protection to a whole new level.

With the completion of CM-02, Service and Trouble Shooting, we will upgrade contractors to an extended **10-year parts and 10-year compressor** warranty. Contractors will then be recognized as a Diamond Level Contractor

That's peace-of-mind, Mitsubishi Electric style.

For more information on training go to the link below:
https://cdn.agilitycms.com/mesca/pdfs-hvac/mem-201809-e-cm-training-brochure_en.pdf

*When installed by a Diamond Level Contractor
